

🌐 New Web Service ▾

## Configure and deploy your new Web Service

Choose service

Configure

Deploy

Docs

### Source Code

sonalishyma / Project-Insight

### Name

A unique name for your web service.

Project-Insight

### Language

Choose the **runtime environment** for this service.

Node

### Branch

The Git branch to build and deploy.

main

### Region

Your services in the same **region** can communicate over a **private network**.

Oregon (US West)

## Root Directory Optional

If set, Render runs commands from this directory instead of the repository root. Additionally, code changes outside of this directory do not trigger an auto-deploy. Most commonly used with a [monorepo](#).

```
e.g. src
```

## Build Command

Render runs this command to build your app before each deploy.

```
$ yarn
```

## Start Command

Render runs this command to start your app with each deploy.

```
$ yarn start
```

# Instance Type

### For hobby projects

**Free**

**\$0** / month

512 MB (RAM)

0.1 CPU

#### Upgrade to enable more features

Free instances spin down after periods of inactivity. They do not support SSH access, scaling, one-off jobs, or persistent disks. Select any paid instance type to enable these features.

### For professional use

For more power and to get the most out of Render, we recommend using one of our paid instance types. All paid instances support:

- Zero Downtime
- SSH Access
- Scaling
- One-off jobs

- Support for persistent disks

|                                  |                         |
|----------------------------------|-------------------------|
| <b>Starter</b><br>\$7 / month    | 512 MB (RAM)<br>0.5 CPU |
| <b>Standard</b><br>\$25 / month  | 2 GB (RAM)<br>1 CPU     |
| <b>Pro</b><br>\$85 / month       | 4 GB (RAM)<br>2 CPU     |
| <b>Pro Plus</b><br>\$175 / month | 8 GB (RAM)<br>4 CPU     |
| <b>Pro Max</b><br>\$225 / month  | 16 GB (RAM)<br>4 CPU    |
| <b>Pro Ultra</b>                 | 32 GB (RAM)             |

Need a [custom instance type](#)? We support up to 512 GB RAM and 64 CPUs.

### Environment Variables

Set environment-specific config and secrets (such as API keys), then read those values from your code. [Learn more](#).
